

Tiago Gómez Cordero

Web Product Designer and Developer

Puebla, Mexico | +52 221 300 1590 | tiagogocor@gmail.com
tiagogoco.com | github.com/Tiagogoco | linkedin.com/in/tiago-gomez-dev

Profile

I build web products running in production with real users and payments: APIs, admin panels and analytics dashboards on PostgreSQL. I work from design to deployment and isolate critical logic into pure, tested modules.

Looking for an internship on an engineering team where code review and testing are part of daily work, to contribute initiative and learn to build software at a larger scale.

Skills

Frontend

React, Next.js, TypeScript, Tailwind CSS

Backend and integrations

PostgreSQL, Supabase, Prisma, REST APIs, Stripe, Mercado Libre

Data and analysis

Python, pandas, FastAPI

Product design

Figma, interfaces, user flows, branding

Tooling and quality

Git, GitHub, Vercel, Vitest

Education

BUAP

BEng in Information Technology

Benemérita Universidad Autónoma de Puebla

Final year

Expected graduation: August 2027

Languages

Spanish

Native

English — Level C

Aptis General, British Council (2026)
· 96/100 in listening and reading

Experience

PIRI Antigüedades

Partner · Full Stack and Product Design

March 2026 — Present | piriantiguedades.com

- Built the storefront and the branding for an antiques business that sustains 90+ monthly sales on Mercado Libre, with Stripe payments, item holds and shipping quotes.
- I sync a catalog of 4,300+ one-of-a-kind items from the Mercado Libre API through webhooks and a 6-hour cron: I process in batches to avoid timeouts and write idempotently so inventory never duplicates.
- Built the back office: a dashboard for estimated profit, margin and idle inventory, coupon creation and setup, listing audits, and carrier shipping configuration.

Rankeo

Own product · Full Stack and Product Design

April 2026 — Present | rankeo.com.mx

- Built the padel tournament and league platform used by Urban Padel and Padelex: online registration and payments, rankings, and four competition formats.
- Isolated the tournament, league and match-scheduling engines as pure deterministic TypeScript, with Vitest tests that check the optimized schedule against a constraint validator.
- Urban Padel ran its June — July 2026 season league on it, plus two tournaments; I am now refining it with feedback from that run and building the workspaces that will let each club administer the platform on its own.

Saint Padel

Freelance · Full Stack and Product Design

July 2026 — Present | saintpadel.com.mx

- Designed and built a drop-based e-commerce for padel gear, with inventory and pre-orders inside a single checkout flow.
- Implemented availability rules and delivery dates for pre-orders, Stripe payments and order tracking for the admin.

Academic project

BI dashboard · Public spending across Puebla

Academic team project | BUAP | May — June 2026

- Built a Python ETL over six public data sources (EFIPEM, PEF, ITER): I normalized mixed encodings and wide/long shapes, then loaded the result into a star schema in PostgreSQL.
- Served the analysis through FastAPI and a Streamlit and Plotly dashboard: Gini coefficient for municipal spending and Pearson correlation between social spending and deprivation across the 217 municipalities of the state.
